
SCOPE OF WORK

PROJECT TITLE

Data Analysis and Mapping of Medicaid Beneficiaries in Indiana

PROJECT BACKGROUND

The National Minority Quality Forum, Inc. (NMQF) previously delivered a comprehensive report on health disparities and disease burden among dual-eligible individuals in Michigan. The current project aims to expand this analysis for the state of Indiana, with a particular focus on behavioral health conditions, including Serious Mental Illness (SMI), Serious Emotional Disturbance (SED), and Substance Use Disorder (SUD).

This work is driven by the need to understand geographic variations and racial disparities in major conditions related to behavioral health among Medicaid beneficiaries. By identifying these trends, we aim to anticipate population needs and adjust interventions accordingly, ensuring the Centene/NMQF partnership remains responsive and effective in improving outcomes.

PROPOSED WORK

NMQF will engage its internal research and data analysis centers to provide Centene with executive summary report, Excel workbook containing the supporting data tables, and ZIP code-level heat maps on Medicaid beneficiaries in Indiana. The work will be broken into phases, as outlined below.

CENTERS INVOLVED

NMQF's Center for Clinical and Social Research (CCSR)

NMQF's Center for Health Information Systems and Services (HISS)

Deliverables:

- A 1–2-page executive summary highlighting the most significant disparities, geographic hotspots, and strategic implications.
- An Excel workbook containing the supporting data tables and analyses.
- ZIP code-level heat maps illustrating the geographic distribution of priority conditions and disparities.

PROJECT OBJECTIVES

1. Data Analysis

NMQF will conduct an in-depth analysis of geographic and racial/ethnic variations in major behavioral health conditions among Medicaid beneficiaries in Indiana. The analysis will examine differences in the prevalence and distribution of priority conditions across counties, ZIP codes, and Medicaid regions, as well as disparities across key racial and ethnic groups, to help identify areas with potentially higher unmet healthcare needs. This analysis will include:

Behavioral Health related

Broad behavioral health category	Diagnosis descriptions included
1. Schizophrenia & Other Psychotic Disorders	Schizophrenia; paranoid/disorganized/catatonic/undifferentiated/residual/other schizophrenia; schizophreniform disorder; delusional disorders; brief psychotic disorder; shared psychotic disorder; other/unspecified psychotic disorders; psychotic disorder due to physiological condition
2. Bipolar & Related Disorders	Manic episodes; bipolar disorder; bipolar I/II; hypomanic, manic, depressed, and mixed episodes; bipolar disorders in partial/full remission; other/unspecified bipolar disorders
3. Depressive Disorders	Depressive episode; major depressive disorder; single/recurrent episodes; mild/moderate/severe depression; depression with/without psychotic features; depressive disorders in remission; persistent/recurrent depressive disorders; dysthymic disorder; other/unspecified depressive disorders; premenstrual dysphoric disorder
4. Anxiety Disorders	Phobic anxiety disorders; agoraphobia; social phobia; specific phobias; panic disorder; generalized anxiety disorder; obsessive-compulsive disorder; mixed/other/unspecified anxiety disorders; anxiety disorder due to physiological condition
5. Trauma-, Stress- & Adjustment-Related Disorders	Acute stress reaction; PTSD (acute/chronic/unspecified); adjustment disorders; adjustment disorder with depressed mood, anxiety, conduct disturbance, or mixed symptoms; other/unspecified reactions to severe stress
6. Personality Disorders	Paranoid, schizoid, antisocial, borderline, histrionic, avoidant, dependent, narcissistic, factitious disorders, other specified, and unspecified personality disorders

Data Range

The Medicaid and CHIP T-MSIS Analytic File (TAF) Data Files 2021

2. Mapping and Visualization

NMQF will provide heat maps at ZIP code-level across Indiana to illustrate geographic variations in priority conditions related to behavioral health among Medicaid beneficiaries. These maps will help identify healthcare disparities and social needs hotspots.

3. Summary Report

Based on the data and heat maps, NMQF will provide a brief executive report highlighting the most significant disparities, geographic hotspots, and strategic implications.

DELIVERABLES OVERVIEW

1. Data Analysis

Focus: Behavioral Health among Medicaid beneficiaries in Indiana (2021), with data stratified by age and race/ethnicity, and reported at the county, ZIP code, and Indiana Medicaid region levels (linked to counties): https://provider.indianamedicaid.com/ihcp/Misc_PDF/MCE_Region%20Map.pdf

Due Date: 9/22/2026

2. Final Report

NMQF will provide a 1–2-page executive summary report, highlighting the most significant disparities, geographic hotspots, and strategic implications.

Due Date: 9/25/2026

3. Mapping and visualization (Optional)

Based on the results from the data analyses, NMQF will develop ZIP code-level heat maps across Indiana to illustrate geographic variations in behavioral health conditions among Medicaid beneficiaries. These maps will help identify areas with significant healthcare disparities and hotspots of unmet social needs..

Due Date: 9/25/2026

PRICING

NMQF's Center for Clinical and Social Research

Data management and analysis

NMQF's Center for Health Information Systems and Services

Data acquisition and final Report

(Optional) Data visualization with heat maps: \$5,000

TOTAL: \$10,000 (Key analyses and Report) + \$5,000 (Data visualization) = \$15,000

TIMELINE

Activity / Deliverable	Date
Project Initiation (upon contract signing)	9/8/2026
Data Analysis and Tables (in Excel workbook)	9/22/2026
Final Report	9/25/2026
